

YASH PANDIT [Immediate Joiner]

Angular | React | Python FastAPI | AI/LLM Integration | Team Lead

 Portfolio  Github  LinkedIn  yashpandit343@gmail.com  +91 8867642126  Bangalore - 560100

PROFESSIONAL SUMMARY

Full Stack Engineer with 5+ years of experience building scalable enterprise applications across frontend, backend, and AI-driven systems. Specialized in Angular/React and Python FastAPI with strong expertise in system integration and LLM-powered application development. Proven track record of optimizing performance, designing robust APIs, and delivering intelligent automation solutions. Experienced in leading agile teams, owning architecture decisions, and delivering high-impact cross-functional projects.

TECHNICAL SKILLS

Frontend — React, Angular (v2–17), Ionic, Javascript, Typescript, HTML, CSS, SCSS, Tailwind CSS, Bootstrap, Context API, Redux, Leaflet maps, ArcGIS, Pdftron, Angular Material, Chakra UI, Highcharts, SyncFusion, PrimeNG

Backend — Python, FastAPI, REST API Design, Paraquet, GeoJSON, GPKG, JSON

AI/LLM — LangGraph, LLM Integration(Ollama, Gemini API), Embeddings, RAG, Agents, Context Window management, Multi-Model Architecture, Prompt Engineering, AI Application Development, Document AI Pipelines

Tools — Cursor AI, VS Code, Git/Github, ChatGPT

Architecture — Cloudflare, AWS cloud services (EC2, Lambda, RDS, S3), CI/CD pipelines, GitHub Actions, Docker.

EXPERIENCE

Systems Integration Senior Specialist, NTT Data

10/2025 – Present
Bengaluru

- Engineered and maintained enterprise-scale full-stack applications using React, TypeScript, and Python FastAPI, delivering high-performance solutions for mission-critical business workflows.
- Architected and developed scalable RESTful APIs and cross-platform integrations, enabling seamless data exchange across multiple enterprise systems and reducing integration complexity.
- Spearheaded the development of an AI-powered RFP automation platform leveraging LLMs, RAG pipelines, and end-to-end agentic workflows, significantly accelerating proposal generation and improving content quality.
- Designed and delivered geospatial applications utilizing Leaflet, ArcGIS, GeoJSON, GPKG, and Parquet datasets, enabling large-scale spatial data visualization and analysis for business-critical use cases.
- Enhanced AI pipeline efficiency through advanced prompt engineering, intelligent document chunking, and batch-processing strategies, enabling reliable processing of large CSV/XLSX datasets at scale.
- Optimized document generation architecture through asynchronous processing, parallel execution, and workflow orchestration, reducing end-to-end generation time by over 85% (40 minutes to 5–7 minutes) while improving system scalability and throughput.

Lead Software Engineer, 73 Strings

01/2024 – 10/2025
Bengaluru

- Spearheaded the development of enterprise-scale Angular applications, implementing performance optimization strategies that improved application responsiveness by 30% and reduced page load times by 40%.
- Owned the complete feature delivery lifecycle—from requirements gathering and architecture design to implementation and production deployment—while serving as Technical Lead, increasing team sprint velocity by 25%.
- Led an organization-wide migration of three monolithic frontend applications to a Micro Frontend architecture, enabling independent deployments, improved scalability, faster release cycles, and enhanced developer productivity.
- Partnered closely with the CTO and founding team to define technical roadmaps, evaluate architectural decisions, and drive long-term platform modernization initiatives.
- Established engineering best practices through rigorous code reviews, architectural guidance, and developer mentorship, significantly improving code quality, maintainability, and team productivity.
- Collaborated with product, design, QA, and business stakeholders to successfully deliver high-impact client-facing modules ahead of schedule while maintaining quality and performance standards.
- Designed and developed Python-based web scraping and workflow automation solutions that eliminated manual effort, accelerated data collection processes, and significantly improved operational efficiency.

Senior Software Engineer, Cloudtara Technologies

12/2020 – 12/2023
Bangalore

- Designed and developed a library of modular, reusable UI components and shared frontend utilities, reducing feature development effort by 40% and improving application consistency across projects.
- Partnered closely with QA and DevOps teams to strengthen release processes, improve test coverage, and enhance deployment reliability, resulting in a 35% reduction in production issues.
- Developed full-stack financial data visualization and analytics platforms, enabling more accurate business insights and improving analytical accuracy by 20%.
- Engineered Python-based data processing and automation pipelines that ingested Excel datasets, performed complex transformations, applied business rules, standardized data formats, executed advanced calculations, and generated validated output files while preserving source data integrity.
- Automated previously manual data-cleaning and reporting workflows through scalable Python scripting, significantly reducing processing time, improving data quality, and minimizing operational effort.
- Served as Scrum Proxy, facilitating sprint planning, backlog refinement, daily stand-ups, retrospectives, and client demonstrations, ensuring effective stakeholder communication and consistent delivery of business objectives.

EDUCATION

Bachelor of Engineering (Information Science and Engineering), KLS Gogte Institute of Technology

2016 – 2020
Belgaum
